## IPS Meteostar Hosts International Hydrology Students During US Visit.

**Englewood CO, June 14, 2008:** IPS Meteostar, Inc. (IPSM; <http://www.meteostar.com>) of Colorado, in conjunction with the National Weather Service (NWS; <http://www.nws.noaa.gov>) and the University Cooperation for Atmospheric Research (UCAR; <http://www.ucar.edu>) of Boulder, Colorado, hosted over 25 international hydrology students during a recent visit to Colorado.

Hydrology students from 26 different countries converged on Boulder, Colorado to attend the International Hydrologic Analysis and Forecasting Course conducted by UCAR/COMET. This 3-week class brought together professional scientists from around the world for intensive hydrological and meteorological training. As part of the field trip portion of the course, the IPSM Hydrology Team, consisting of IPSM and Weather Decision Technologies, Inc. (WDT; <http://www.wdtinc.com>) of Norman, Oklahoma, hosted the students at IPSM facilities in Englewood, CO. The trip to the IPSM facilities included a tour and company capabilities discussion, focused on the solutions the IPSM Hydrology Team can provide to organizations around the globe.

While at the IPSM facilities, the students learned about the IPSM LEADS product line, met with key hydrological nowcasting modelers, and discussed the overall impacts of hydrology on the global scene. Students also learned how IPSM and its teammates can provide solutions for data management, and QPE/QPF forecasting for their hydro-meteorological systems. Feedback from the students was glowing and the visit was an overwhelming success! The International Hydrologic Forecast Course wraps up on June 27th. For more about the LEADS product line, go to [www.meteostar.com](http://www.meteostar.com).
